

# Safe Side Security, Inc.

will help you cut the cord with your land lines!

## Introducing The Safe Side Mesh Radio Network ~ A Fire Alarm Monitoring System with a wireless dialer.

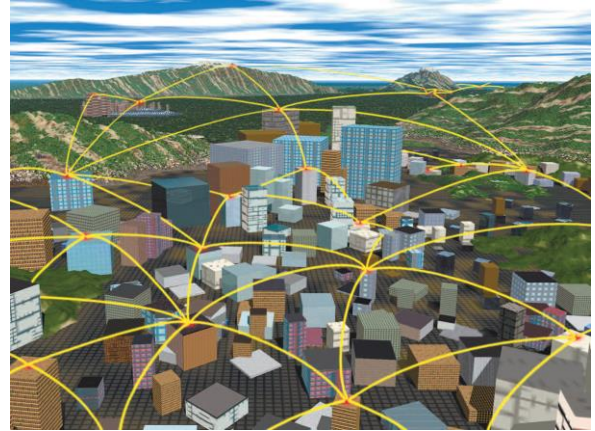

Eliminate your fire  
system phone lines!

Everyone's cutting  
phone lines...

Save hundreds of  
dollars a month!

Your alarm system is only as reliable as its ability to transmit alarm signals to the monitoring center. **The Safe Side Radio Network's** patented wireless mesh technology automatically senses wire and antenna cuts, and monitors battery and AC power status. Advanced status reporting, self-diagnostics and a built-in power supply make it the first choice for all wireless alarm communication needs and insures that your alarm gets transmitted faster and more reliably than traditional alternatives.

This confirmed message delivery transceiver and repeater is housed in a full size locking steel cabinet for superior performance.

Wireless mesh networking is an innovative technology adopted by many industries with applications that need to communicate data over a large geographic area with a high level of reliability at a low total cost of ownership.

The advanced design and 2-way communications capability provides easy installation, expansion, and management when compared to alternative communication methods, both wired and wireless.

### Wireless alarm transmission for fast, safe and reliable alarm reporting.

Don't trust your home or business to outdated alarm transmission systems that are slow, can fail or be rendered inoperative when they are needed most. The Safe Side Mesh Radio Network is the fastest, most reliable method to transmit alarm signals.

For more information please call Safe Side Security at 800/794-7575.
